

ABSTRACT

DISPOSABLE HANDKERCHIEF-BAG DEVICE

5 A disposable handkerchief-bag device (10), of those acquiring a regular shaped
surface (13) by means of an unfolding motion, made of a flexible and absorbent
material allowing its use for blowing one's nose, collecting or storing materials of a
different nature, for protecting the respiratory tract and for temporarily reducing the
amount of oxygen inhalation, characterized in that it comprises a folding system, the
opening (11) of which allows access to the inside and the possibility of subsequent
10 closing (12), which is configured with means (9) for facilitating the gripping of the bag
with the fingers, said handkerchief-bag (10) being folded when it is not in use.
